

Technical Manager

Provide technical vision, design, and project leadership in this role serving as a technical evangelist for information technology and Esri software. This is a challenging opportunity for an accomplished GIS professional with proven experience to help define and lead technical support efforts for ArcGIS and systems design and configuration.

Responsibilities

- Manage a team of GIS software support engineers to help define, build, and GIS specifications and project requirements
- Capture key user workflows and functions that will be engineered into the GIS project
- Synthesize user requirements, industry needs, and competitive analysis into an effective project specification
- Provide direction and lead teams
- Oversee various projects and work with managers to set goals and milestones
- Communicate the goals and progress of the project implementation team to various audiences
- Help to define and implement division-wide project management efforts

Requirements

- Bachelor's or Master's in computer science, GIS, or related field, depending upon position level
- A minimum of five years of advanced GIS experience in mapping, geodata management, or geoprocessing projects
- Special insight into how to apply GIS
- Desire to define new GIS technology for use by GIS practitioners
- Creative problem solving skills and ability to propose solutions
- Proven leadership experience
- Strong verbal and written communication skills

Recommended Qualifications

- Presentation skills
- Programming background with languages such as C#, python, VB, or Java
- Consulting background
- Project management or planning experience on project teams
